DETAILED ACTION

Page 2

Response to Amendment

1. This Office action is responsive to the amendment dated January 11, 2005. Claims 9, 20, 21, 25, and 28 were amended. Claims 24, 29, and 30 are canceled. Claims 1-23, 25-28, and 31-33 are pending.

- 2. The suggestion to update the specification listed in paragraph 1 of the last Office action is withdrawn, because the suggestion was set forth in error by the examiner.
- 3. The objections to claims 20, 21, 24, 25, and 29 set forth in the last Office action, paragraph 2, are withdrawn due to the amendment and cancellation of claims 24 and 29.
- 4. The rejections over claims 9, 14, 25, and 28 under 35 USC 112, second paragraph, set forth in the last Office action, paragraphs 3-8, are withdrawn due to the amendment.
- 5. The rejection of claims 29 and 30 under 35 USC 102(b) as being anticipated by "A New Yellow Fluorescent Dopant For High-Efficiency OLEDs", 11th International Workshop On Inorganic And Organic Electroluminescence & 2002 International Conference On the Science And Technology Of Emissive Displays and Lighting, Sept. 2002, Session 4, E12002 Ghent, Ghent University, Ghent, Belgium by Wu et al. due to the cancellation of claims 29 and 30.
- 6. The terminal disclaimer filed on January 11, 2005 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of copending Application No. 10/701,241 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Application/Control Number: 10/700,916 Page 3

Art Unit: 1774

7. The provisional double patenting rejection set forth in the last Office action, paragraph 12, is maintained over claims 1-23, 25-28, and 31-33, because a terminal disclaimer for Application No. 10/700,894 has not been provided.

8. The indication of allowable subject matter set forth in the last Office action is withdrawn.

Claim Objections

9. Claim 28 is objected to because of the following informalities:

It is suggested that the word "and" be inserted prior to the last compound listed in claim 28 and a period be placed at the end of claim 28. Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 11. Claims 1, 5-9, 13-23, 25-28, and 31-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato et al. (JP 04-335087). Sato et al. discloses an organic electroluminescent element comprising a light-emitting hole injecting and transporting layer comprising a dopant naphthacene derivative according to formula (I) that comprises a substituent group such as an alkyl, aryl or aromatic ring that may be substituted (see Sato abstract). Although Sato et al. does not exemplify compounds with alkyl or non-aromatic carbocyclic groups according to the claimed formulas, it would have been obvious to one of ordinary skill in the art at the time of the invention to have selected naphthacene derivatives with the substituent groups for the Sato et al. device according to the presently claimed compounds, because Sato et al. generally teaches all

Application/Control Number: 10/700,916

Art Unit: 1774

the required substituents for naphthacene derivatives according to the instant claims. Because the Sato et al. naphthacene derivatives may have all the same substituents required by the presently claimed dopant compounds, the properties set forth in claim 25 are deemed to be inherently met by the Sato et al. compound(s). Sato et al. teaches the naphthacene derivative is doped into an amine compound per instant claims 22 and 23 (see par. 22). Sato et al. further teaches the amount of dopant with respect to the host material is in the range of 10⁻³ mol % to 10 mol % (see par. 25) with regard to claims 5, 6, 26, and 27.

Page 4

12. Claims 2-4 and 10-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato et al. (JP 04-335087) in view of Lin et al. (US 2003/0099860 A1). Sato et al. is relied upon as set forth above. Sato et al. fails to teach a white light emitting device. Lin et al. teaches, in analogous art, white light emitting devices are desirable in the art and may be formed by combining red, blue, and green emitting colors to form a white light source (see par. 14). In addition, it is known in the art to use color conversion layers (filters) to convert light of different colors to white light (see par. 12). It would have been obvious to one of ordinary skill in the art to have made a white light emitting device by adding either a blue emitting compound to the Sato et al. device or a color filter, because Lin et al. teaches white light emitting devices are desirable in the art and addition of color layers or filters are ways of achieving white light emission.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in 13. view of the new ground(s) of rejection.

Conclusion

14. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Dawn Garrett whose telephone number is (571)272-1523. The

examiner can normally be reached Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Rena Dye can be reached at (571) 272-3186. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
